

Modern Helmets

- STEP 1: Place flashlight inside the Blackjack flashlight holder.
- STEP 2: Place the helmet visor in the "down" position.
- STEP 3: Place lens assembly of light next to down angle of shield. When in correct position lens assembly of light will rest in the ear arch of helmet, directly below visor mount assembly, with visor touching front of light when visor is down.
- STEP 4: Secure all three set screws. Caution must be given NOT to OVER TIGHTEN any of the set screws. The 3 point contact design allows for TIGHT screws without penetrating or damaging the material of the helmet brim.

On MODERN style helmets when in the correct position the light will touch the brim at both the rear and front of the light, along with the Blackjack holder to complete the SAFE and STABLE 3 point contact.

Traditional Helmets

Placement on TRADITIONAL style helmets is similar to that of MODERN style helmets when the helmet has a horizontal or slightly down sloping brim. For helmets with brims that curve up, placement is completely user dependant. Remember NOT to OVER TIGHTEN the set screws. The set screws should be tight and the light should be stable and solid on helmet without damage to brim.
