## Operational Finger Light

The Millite NVG is a finger-mounted hand free rugged, powerful, white L.E.D light covered with unique NVG compatible optical filter, two selectable intensities flash light.

Specially designed for aviators using Gen II/III class A&B Aviator Night Vision imaging Systems (ANVIS). Right / left hand index finger operation.

ON /OFF operation done by momentary pressing one or both switches.

While ON: flipping between the light intensities done by pressing and holding one or both switches.

Auto OFF after 8 minutes of continuous operation.

The Millite white is a finger-mounted hand free, rugged, powerful, ultra bright two selectable intensities and blinking signaling mode L.E.D flash light.

Specially designed for aviators and military professionals.

Right / left hand index finger operation.

ON /OFF operation done by momentary pressing one or both switches.

While ON: flipping between the light modes done by pressing and holding one or both switches.

Auto high intensity blinking activated after 8 minutes of continuous operation for emergency self-identification.

The Millite UV is a finger-mounted hand free rugged, powerful, UV two selectable intensities L.E.D light.

It generates a powerful narrow beam of UV light illumination for professional military & security uses.

Unlike traditional lights the Millite generates most of the light out of the visible spectrum and in full darkness, it will cause certain Objects to glow at distance of over 20 feet.

Right / left hand index finger operation.

ON /OFF operation done by momentary pressing one or both switches.

While ON: flipping between the light intensities done by pressing and holding one or both switches

Auto OFF after 8 minutes of continuous operation.

State of the art finger-mounted hand free, rugged, powerful, Ultra bright L.E.D flash light.  
Right / left hand index finger operation.  
Originally designed for and used by elite Military forces.

- \* Ergonomically shaped.
- \* Over molded rubber body.
- \* Right / left hand index finger operation.
- \* Ultra bright L.E.D two selectable light intensities, blinking signaling mode in White.
- \* Auto OFF after 8 minutes of continuous operation, blinking for emergency self-identification in White.
- \* L.E.D for high reliability.
- \* Operation temp': -10°C to 70°C.
- \* Operation temp': 14°F to 158°F.
- \* General use SR44/LR44/A76 batteries.

3 years guarantee for  
defected parts and  
workmanship  
(Excluding Batteries).  
Modification, abuse or  
negligence Of  
maintenance will void  
this Warranty.
